Project name: Tree Housing Publication

## **Project Documentation: Tree Housing Publication Component Organization and Workflow**

### **Project Structure**

The project is organized to ensure modularity and scalability, following Vue.js best practices. The structure includes:

1. `src/components` Folder
  - Contains reusable components and their related subcomponents.
  - Each main component is organized in its folder for better structure and maintainability.
2. `src/views` Folder
  - Acts as the entry point for integrating the subcomponents of main components.
  - Provides a clean interface for routing and page rendering.
3. `src/assets` Folder
  - Contains all the UI elements, such as images, icons, and styles, used in the Tree Housing Publication.
  - It serves as the repository for all static assets that are needed for the frontend UI.
4. `src/router/index.js` File
  - Manages the application's routing.
  - Links views to specific routes, enabling navigation between pages.
